

Grant Announcement:

University Research in Homeland Security S&T Mission Areas

Department of Homeland Security announcement for University Grants. It closes on 21 March. The maximum amount for an individual award made under this announcement will not exceed \$250,000 for total costs (direct and indirect costs).

Synopsis of Program:

The Department of Homeland Security (DHS) Science and Technology (S&T) Directorate is soliciting applications for research projects aligned with the mission and requirements of DHS S&T. These projects should be designed to augment and complement, through international research and collaboration, the depth and breadth of homeland security science and technology research.

Specifically, the S&T Directorate seeks proposals that will contribute to homeland security science and technology, including but not limited to:

- Evaluation of novel tools or approaches to confronting homeland security challenges;
- Basic research to provide data, understandings, or models that support S&T or policy decisions by the Department of Homeland Security; and
- S&T and operations research evaluations to support revolutionary improvements in DHS's mission and its component agencies' operations.

This funding mechanism does not seek to support prototype or product development—but proposals that address real-world testing and evaluation of novel approaches or tools will be considered for funding.
